LIFE IS TOO AMAZING TO BE STUCK  
INSIDE. OUR FUTURE VISION.

**AI.** In a world where AI can replace/automate many jobs and tasks we will find "the future human" do things robots cannot do and feel things robots cannot feel.

Human feelings of love, joy, belonging and exploring the world "IRL" (in real life) will become of much higher value. To meet the human need to explore life outside the comfort zone, such as flying anywhere or traveling everywhere will make long distance transportation industries to become faster and smarter, and we are prepared to meet that future with our innovations and ideas.
